

CHEMICAL AWARENESS

This is a half day course tailored to the size, nature and exposure hazards to those persons at risk or who have to handle chemicals as part of their daily work schedule.

The course will be made as site specific as possible.

Course syllabus includes:

- What are chemicals
- Understand current Legislation and best practice
- How exposure can affect our health & bodies
- How chemicals can enter the body
- CPL & Reach regulations
- MSDS Sheets and their importance in the workplace
- Risk & Safety phrases
- Safe storage and use of chemicals
- Chemical risk assessments
- Control of chemicals/hazardous substances in the workplace
- Control measures
- Importance of PPE in line with the requirements of the MSDS
- First aid when dealing with chemical exposure

A small assessment exam is given to students to ensure a full understanding of chemical safety and awareness in their place of work.

This exam will be site specific to the risks on their site
